

DNA on HOPG modified with 1-Octadecylamine

1 μm topography (left) and the phase images of the ss-DNA deposited on HOPG modified with 1-Octadecylamine.

500 nm topography (left) and the phase images of the ss-DNA deposited on HOPG modified with 1-Octadecylamine. In both images the lamellar structure of the 1-Octadecylamine is clearly resolved.
